

Microsoft 365 Endpoint Management

It is easier than ever to access your business information and applications with Microsoft 365, enabling employees to stay in touch and be productive from anywhere on any device. This makes it more important than ever for you to identify and control access to devices connecting to your Microsoft 365 services.

CPS understands that it can be challenging to keep data and applications secure. Microsoft Endpoint Manager (Intune) empowers you to take control of your device estate and gain visibility on access to apps and services.

**Secure devices and apps
with Microsoft Intune.**

**Microsoft 365 Endpoint Manager
enables your users to work more securely
anywhere, anytime, and on any device.**

This engagement is ideal for both new and existing customers of all sizes who allow both business-owned and bring your own device (BYOD) access to their Microsoft 365 tenant apps and services.

CPS' Microsoft 365 Endpoint Management service has been designed to protect your desktop and mobile devices and your business applications. Our Microsoft Certified Consultants work with your IT and Security teams to:

- Support a diverse mobile environment and manage devices securely
- Ensure devices are compliant with your organisation's security requirements
- Protect your company information and control the way employees access and share information

What can be included

- Provision and deployment of desktop devices using Windows Autopilot
- Protection of company-owned devices with Mobile Device Management policies
- Bring your own device (BYOD) access with Mobile Application Management policies
- Conditional Access Policies

“ Cyber security has been a major news item during the past year. Microsoft 365 Security, Compliance and Identity is part of how organisations can keep ahead of bad-actors.
**Peter Rising, MVP & Head of
SCI, CPS** ”
