

# Microsoft 365 Risk Management

Security & Compliance teams generally focus on protecting against external threats whilst largely ignoring or being unaware of the risk posed by insiders with legitimate access to business data and apps. Internal risks can be even more difficult to detect, so a modern risk management framework is needed to respond to insider threats. CPS works with you to address the biggest gaps in Insider risk management today with insights and tools which can be tuned to recognize threats and respond to indicators, for example:

1. Malicious employees (Insider threat)
2. Communication compliance e.g. inappropriate language and behaviour
3. Data exfiltration by departing employees

Microsoft 365 Risk Management tools allow you to view and work to mitigate these and other risks through advanced auditing, and customisable alerts, policies and cases.

**Identify and mitigate risks with Microsoft 365 Compliance tools.**

**Microsoft 365 Risk Management correlates signals across user activity, provides customisable machine learning policy templates, and helps to detect and remediate policy violations.**

**This engagement is for new and existing Microsoft 365 users of all sizes to define your modern Risk Management posture.**

CPS' Microsoft 365 Risk Management service is designed to deliver risk detection, mitigation and remediation to your organisation. Our Microsoft Certified team works with your Business, IT and Compliance teams to:

- Identify data risk
- Define event triggers
- Define priority content
- Configure risk policies and alerts

## What can be included

- Insider Risk Management
- Advanced Audit
- Communication Compliance
- Privileged Access Management
- Information Barriers
- Customer Lockbox

“Cyber security has been a major news item during the past year. Microsoft 365 Security, Compliance and Identity is part of how organisations can keep ahead of bad-actors.”

**Peter Rising, MVP & Head of SCI, CPS**
