

## **SharePoint Infrastructure Consultant**

### **Overview -**

This role is responsible for all aspects of deploying appropriate infrastructure platform solutions to CPS clients. This includes:

- initial engagement and analysis of client needs
- Infrastructure design
- Implementing all aspects of the selected Microsoft solution.
- Performance testing
- Disaster recovery and failover
- Pre-sales support for clients
- Delivery of quality supporting documentation at all stages (including Architecture Design and Implementation documentation)

Solutions delivered are based on leading edge Microsoft products, mainly SharePoint server, Project Server and SQL servers. Liaising with engagement leads and technical leads, support and development staff. Based primarily at client sites throughout the UK, therefore willingness to travel widely is a prerequisite.

### **What we offer:**

- The opportunity to investigate and exploit the latest Microsoft technologies to keep abreast of technological advances – ensure you and CPS have leading edge knowledge.
- Dealing with a varied cross section of clients –local and national government, public sector, blue-chip UK and global organisations
